

# Mobile Applications for Education

**Bring “Less Touch, More Trust” to a range of educational environments**

Today, rf IDEAS® extends our industry-leading WAVE ID® authentication technologies into the industry’s most flexible and accessible range of mobile credential solutions.

These on-the-go, contactless solutions provide seamless authentication via smartphone credentials while offering compatibility with existing cards.

# Mobile Applications for Education

Here are just a few of the ways that mobility delivers a clear advantage in safety, security and productivity

## Identity Access Management

Use WAVE ID® Mobile readers with integrated **Bluetooth®** technology to eliminate usernames and passwords. Access records, transcripts and equipment checkout with a quick wave versus time-consuming logins.

## Contact Tracing

Educational institutions at all levels are using mobile readers as a critical element in their proactive contact tracing efforts. Positive cases can be traced from school bus to classroom or lecture hall to cafeteria, streamlining efforts to mitigate spread.

## Time & Attendance

Automatically and accurately capture faculty, student and staff credentials to analyze arrivals, departures, or breaks. Know who's participating in special events or logging into hourly timesheets.

## Smart Wallet

Give students, faculty and staff a fast and convenient way to login and pay for cafeteria/on-campus restaurant items, health club memberships or other on-premise services.

## Training

Securely and effortlessly track employee attendance at required academic training sessions, seminars or mandatory events.

## Secure Print

Use smartphone credentials to provide simple, powerful protection against unauthorized access to confidential student records and other important data found on network-connected multifunction printers.

# Mobile Applications for Education

A wide range of high-performance readers

## WAVE ID® Mobile Readers

To support mobility in all educational environments, rf IDEAS® offers dual-frequency readers that incorporate a **Bluetooth®** reader for reading existing 125 kHz proximity or 13.56 MHz contactless smart cards.

### Our growing list of mobile credential readers include:

WAVE ID® Mobile Reader  
for Orange Business Services Pack ID
